about

Junior developer with one year of internship experience, I am good with TypeScript and Java.

Passionate about building modern web applications, I am seeking a fullstack, front-end, or back-end role where I can continue growing my skills and contribute to real projects within a dynamic team environment.

skills

Languages

Java, Typescript, Python, HTML, CSS

Frameworks

React, Spring Boot, Django, Angular

Tools

git, Jira, Figma

education

Engineering degree
Network and telecommunication

2015 - 2021
University of Technology of Troyes

TOEIC Certification
English, C1

2018
Scored 980/990

work experience

Front-end developer   Younivibe

Designed and developed the landing page to convert potential leads into future clients.
Automated the deployment pipeline and wrote the documentation.
Python Scraping to generate leads.

July 2025 - August 2025

Fullstack developer   Coreoz

Redesigned a business app for managing notary accounts and structures.
Updated the internal project monitoring tool.
Introduced Typescript and refactored code to improve code quality.

November 2020 - April 2021

Backend developer   Factorythings

Implemented communication protocols (Modbus and OPCUA) in a data visualisation application.
Refactored code and wrote unit tests to enforce code maintainability

August 2018 - January 2019

side projects

Fullstack web projects   April 2025 - Today

Application tracking tool
Online portfolio
Movie database

Gamedev projects   June 2021 - December 2023

Developed a framework to load and integrate mods in games made in Godot
Designed game systems
Built and animated 3D models in Blender

Biking intructor - volunteer   September 2025 - Today

I'm accompanying adult pupils through their bicycle learning journey.
We teach them from the beginning, going through the basics before moving onto more advanced techniques, and then going into everyday situations to tackle safety and traffic rules
